

Introduction to R

Noushin Ghaffari, PhD

Bioinformatics Scientist, Genomics and Bioinformatics, Texas A&M AgriLife Research

Research Scientist, Texas A&M High Performance Research Computing

DIVISION OF RESEARCH
TEXAS A & M UNIVERSITY

What is R?

- Open source programming language and software environment for statistical computing and graphics
- Supported by the R Foundation for Statistical Computing
- Supports multiple platforms and can be easily extended.
- The “Comprehensive R Archive Network” (CRAN) is a collection of sites which carry identical material, consisting of the R distribution(s), the contributed extensions, documentation for R, and binaries.
- The CRAN master site at WU (Wirtschaftsuniversität Wien) in Austria can be found at the URL <https://CRAN.R-project.org/>
 - Mirrored daily to many sites around the world <https://CRAN.R-project.org/mirrors.html>

Why R?

- Open source
- Comprehensive collection of statistical functions
 - Linear modeling, classification, clustering, genomics analysis, economic and financial analysis, etc.
- Large user community – support
- Collection of “packages”
 - A package is a shared code, documentation/Vignettes, data (occasionally)
- Multi platform, but not too sensitive about the source platform
- Command-line or graphical user interface (recently)
- Anyone can contribute

```

full-165-91-49-94:Noushin_Intro_to_R_20Apr18 noushin$ R

R version 3.3.3 (2017-03-06) — "Another Canoe"
Copyright (C) 2017 The R Foundation for Statistical Computing
Platform: x86_64-apple-darwin13.4.0 (64-bit)

R is free software and comes with ABSOLUTELY NO WARRANTY.
You are welcome to redistribute it under certain conditions.
Type 'license()' or 'licence()' for distribution details.

  Natural language support but running in an English locale

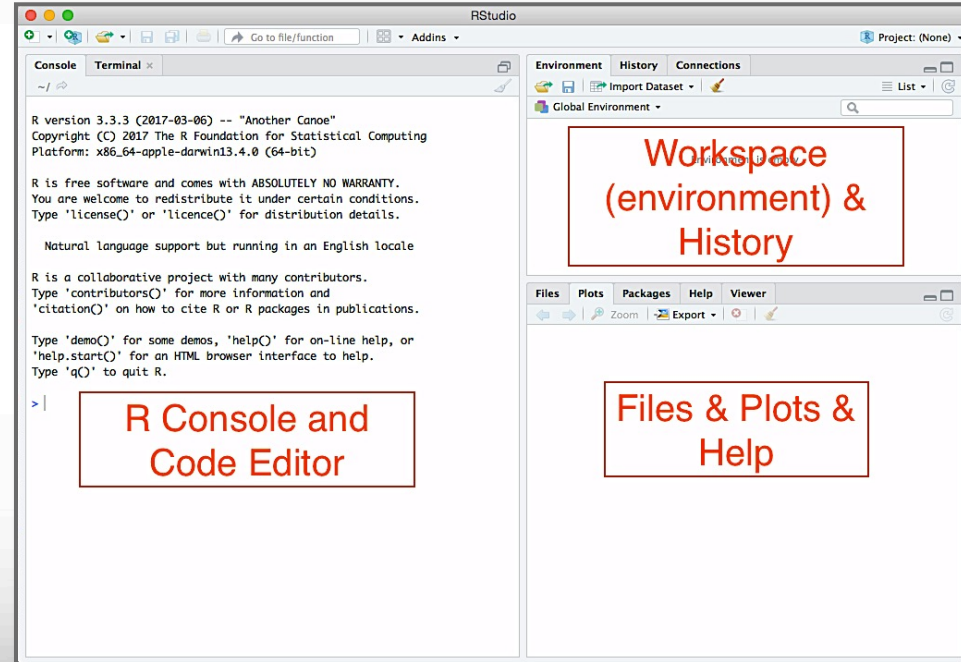

R is a collaborative project with many contributors.
Type 'contributors()' for more information and
'citation()' on how to cite R or R packages in publications.

Type 'demo()' for some demos, 'help()' for on-line help, or
'help.start()' for an HTML browser interface to help.
Type 'q()' to quit R.

>
```

What is RStudio?

- An integrated development environment (IDE) for R
- Graphical Interface – user friendly environment
- Embedded Text Editor
- Auto completion on names (functions)
- Simplified plot and output view

Running R for this Course

- Your own laptop - You need to install R on your laptop using R download page: <https://cran.r-project.org/mirrors.html>
- TAMU Open Access Lab (OAL) computers have R and RStudio installed
- TAMU NetID - You can use the online Jupyter notebook for the class
 - Off campus needs VPN
- HPRC Portal to run Rstudio: <http://portal.hprc.tamu.edu>
- TAMU HPRC Ada System Account – You can use R_Tamu on Ada or choose Jupyter Notebook
 - Off campus needs VPN

Using Jupyter Notebook

Jupyter is a web application that allows you to easily connect to a remote server and run applications. We will be using **Jupyter** to connect to **titan.tamu.edu** and use R.

To access the **Jupyter Notebook** you will need:

- An Internet-connected device (desktop, laptop, or large tablet is preferred)
- Internet access (tamulink-wpa Wi-Fi, OAL Ethernet)
- An Internet browser

Jupyter Notebook Access

(1) Open your Internet browser.

(2) Go to one of the following links:

<https://titan.tamu.edu:8000/>

(3) You should then see a login window.

Use your NetID credentials to log in.

This is the same username and password as Howdy and Ada.

A screenshot of a web login interface. At the top is an orange header bar with the text "Sign In" in white. Below the header, the word "Username:" is followed by a white text input field with an orange border. Below that, the word "Password:" is followed by a white password input field with an orange border. At the bottom of the form is an orange button with the text "Sign In" in white.

[Introduction to R 14May19.ipynb”](#)

(5) Before class begins, please re

To do this, click on “Kernel -> Res

Connecting to HPRC to Use R

- SSH (secure shell)
 - The only program allowed for remote access; encrypted communication; freely available for Linux/Unix and Mac OS X hosts;
- For Microsoft Windows PCs, use *MobaXterm*
 - <https://hprc.tamu.edu/wiki/HPRC:MobaXterm>
 - You are able to view images and use GUI applications with MobaXterm
 - or *Putty*
 - https://hprc.tamu.edu/wiki/HPRC:Access#Using_PuTTY
 - You can not view images or use GUI applications with PuTTY
- Both state of Texas law and TAMU regulations prohibit the sharing and/or illegal use of computer passwords and accounts
- Don't write down passwords
- Don't choose easy to guess/crack passwords
- Change passwords frequently

Using SSH - MobaXterm (on Windows)

Using SSH to Access Ada

```
ssh -X user_NetID@ada.tamu.edu
```

<https://hprc.tamu.edu/wiki/Ada:Access>

You may see something like the following the first time you connect to the remote machine from your local machine:

```
Host key not found from the list of known hosts.
```

```
Are you sure you want to continue connecting (yes/no)?
```

Type yes, hit enter and you will then see the following:

```
Host 'ada.tamu.edu' added to the list of known hosts.
```

```
user_NetID@ada.tamu.edu's password:
```

Login and Set up

- Login to Ada using SSH or MobaXterm
- Let's take a look at the path and create appropriate directories

```
echo $SCRATCH  
cd $SCRATCH  
pwd  
mkdir Intro_to_R_May19
```

Transferring the Code

The R code and its submission script should be copied to users' local directory

```
cd $SCRATCH/Intro_to_R_May19  
  
cp /scratch/training/Intro_to_R/May19/* .
```

Data_Generator.R - 1

```
#randomly generates 10000 number in a matix[100,100]
rand_data <- matrix(ncol=100,nrow=100,data=runif(10000,1,100))

#getting log2 of the data and transposing the results
rand_data_t_log2 <- t(log2(rand_data))

#calculating the min, max and average for rows and columns
mean_cols <- apply(rand_data,2,mean)
mean_rows <- apply(rand_data,1,mean)
min_rows <- apply(rand_data,1,min)
min_cols <- apply(rand_data,2,min)
max_rows <- apply(rand_data,1,max)
max_cols <- apply(rand_data,2,max)
```

Data_Generator.R - 2

```
#making plot and saving results in a pdf file
pdf("Rand_Data_QC.pdf")
g_range <- range(0,min_rows,max_rows)
plot(mean_rows, type="l", col="blue", ylim=g_range, ann=FALSE)
lines(mean_cols, type="l", col="red")
lines(max_rows, type="l", col="green")
lines(max_cols, type="l", col="purple")
lines(min_rows, type="l", col="royalblue")
lines(min_cols, type="l", col="coral")
legend(80,40,c("Mean Rows","Mean Cols","Max Rows","Max Cols","Min Rows","Min
Cols"),col=c("blue","red","green","purple","coral","royalblue"),lty=1,cex=0.55)
dev.off()
```

Data_Generator.R - 3

```
#saving data files  
write.csv(rand_data,"rand_data.csv")  
write.csv(rand_data_t_log2,"rand_data_t_log2.csv")
```

R_Script_Submit.sh

```
#BSUB -J Testing_R_Script  # sets the job name to Testing_R_Script.
#BSUB -L /bin/bash         # uses the bash login shell to initialize the job's execution environment.
#BSUB -W 1:00              # sets to 5 hours the job's runtime wall-clock limit.
#BSUB -n 1                 # assigns 1 core for execution.
#BSUB -R "span[ptile=1]"   # assigns 1 core per node.
#BSUB -R "rusage[mem=5000]" # reserves ~5GB per process/CPU for the job
#BSUB -M 5000              # sets to ~5GB the per process enforceable memory limit.
#BSUB -o stdout.%J         # directs the job's standard output to stdout.jobid
```

```
## Load the necessary modules
```

```
module purge
```

```
module load R_tamu/3.4.2-iomkl-2017A-Python-2.7.12-default-mt
```

```
## Launch R with proper parameters
```

```
Rscript Data_Generator.R
```

Submitting the RScript to Ada

```
bsub < $SCRATCH/Intro_to_R_May19/R_Script_Submit.sh
```

```
Bjobs
```

```
ls -l
```

Course Content

Parts of this course are based on Software Carpentry "Programming with R" and "R for Reproducible Scientific Analysis" lessons.

"Software Carpentry is a volunteer non-profit organization dedicated to teaching basic computing skills to researchers."
