

HIGH PERFORMANCE RESEARCH COMPUTING

Programming Using the Jupyter AI Assistant

November 7, 2025

Keegan Smith

High Performance
Research Computing

DIVISION OF RESEARCH

Schedule

Lab 1: Creating a session (15 minutes)

We will create a jupyter AI Assistant session from the ACES portal.

Lab 2: Debugging with Jupyter AI (15 mins)

We will go through some examples with two popular Python libraries: Pandas and Matplotlib for data exploration.

Lab 3: Creating a PyTorch Application (15 minutes)

We will create and debug a Pytorch application from scratch with the assistance of Jupyter AI.

Lab 4: Creating a Tensorflow Application (15 minutes)

We will create and debug a Tensorflow application from scratch with the assistance of Jupyter AI.

ACES Portal

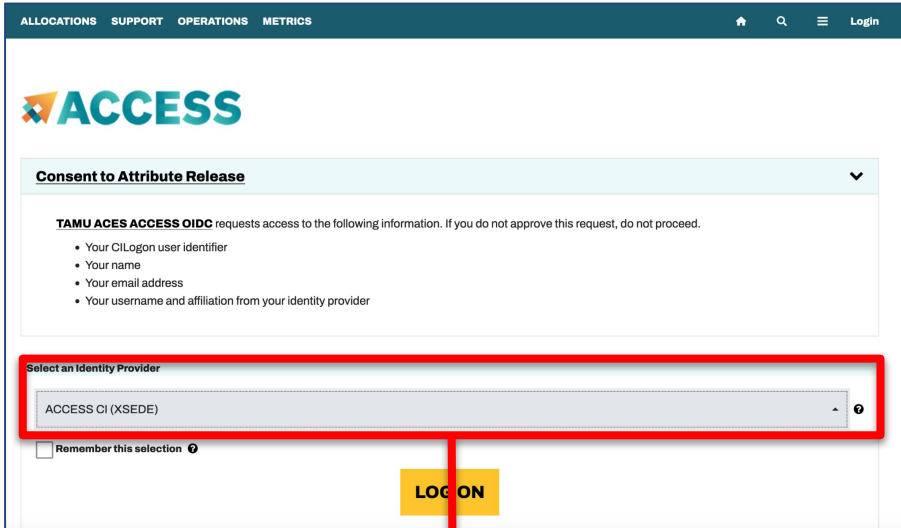

ACES Portal portal-aces.hprc.tamu.edu
is the web-based user interface for the ACES cluster

Open OnDemand (OOD) is an advanced web-based
graphical interface framework for HPC users

Accessing ACES via the Portal (ACCESS)

The screenshot shows the ACCESS portal interface. At the top is a navigation bar with links: ALLOCATIONS, SUPPORT, OPERATIONS, METRICS, and a Login link. Below the navigation bar is the ACCESS logo. A section titled "Consent to Attribute Release" contains a message from TAMU ACES ACCESS OIDC and a list of requested attributes: CILogon user identifier, name, email address, and username/affiliation. Below this is a "Select an Identity Provider" dropdown menu with "ACCESS CI (XSEDE)" selected. A red rectangle highlights this dropdown. Below the dropdown is a "Remember this selection" checkbox. A yellow "LOG ON" button is at the bottom, with a red line pointing to it from the text below.

ALLOCATIONS SUPPORT OPERATIONS METRICS Login

ACCESS

Consent to Attribute Release

TAMU ACES ACCESS OIDC requests access to the following information. If you do not approve this request, do not proceed.

- Your CILogon user identifier
- Your name
- Your email address
- Your username and affiliation from your identity provider

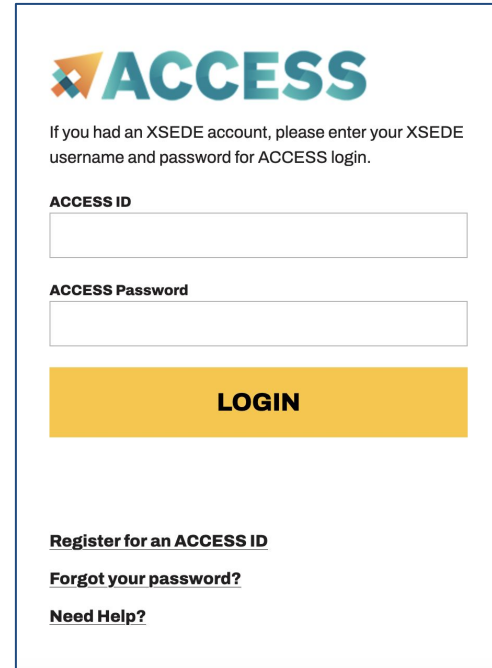

Select an Identity Provider

ACCESS CI (XSEDE)

☐ Remember this selection

LOG ON

Select the Identity Provider appropriate for your account.

The screenshot shows the ACCESS portal login page. At the top is the ACCESS logo. Below it is a message: "If you had an XSEDE account, please enter your XSEDE username and password for ACCESS login." There are two input fields: "ACCESS ID" and "ACCESS Password". Below these is a yellow "LOGIN" button. At the bottom are three links: "Register for an ACCESS ID", "Forgot your password?", and "Need Help?".

ACCESS

If you had an XSEDE account, please enter your XSEDE username and password for ACCESS login.

ACCESS ID

ACCESS Password

LOGIN

[Register for an ACCESS ID](#)

[Forgot your password?](#)

[Need Help?](#)

Log-in using your ACCESS or institutional credentials.

Setting up

OnDemand provides an integrated, single access point for all of your HPC resources.

Message of the Day

IMPORTANT POLICY INFORMATION

- Unauthorized use of HPRC resources is prohibited and subject to criminal prosecution.
- Use of HPRC resources in violation of United States export control laws and regulations is prohibited.
- Sharing HPRC account and password information is in violation of State Law. Any shared accounts will be DISABLED.
- Authorized users must also adhere to ALL policies at: <https://hprc.tamu.edu/policies>

!! WARNING: THERE ARE ONLY NIGHTLY BACKUPS OF USER HOME DIRECTORIES. !!

Setting up

In your terminal, type:

```
bash /scratch/training/jupyter_ai_intro/setup.sh
```

This will put the notebook `jupyter_ai_intro.ipynb` in your `$SCRATCH` directory.

Starting Jupyter AI Assistant

The screenshot shows the ACES OnDemand Portal interface. The top navigation bar includes links for Files, Jobs, Clusters, Interactive Apps, Affinity Groups, Chatbot, Dashboard, Utilities, My Interactive Sessions, Develop, Help, and a user profile icon. The 'Interactive Apps' dropdown menu is open, displaying a list of applications categorized into GUI, Imaging, Servers, and TEST_HPRC_ONLY. The 'Jupyter AI Assistant' option is highlighted with a red circle. Other options in the 'Servers' category include Jupyter Notebook, JupyterLab, RStudio, TensorBoard, and Tutorials OnDemand. The background of the portal shows the ACES logo and a 'Message of the Day' section.

This app will launch a [JupyterLab](#) server on the [ACES cluster](#) with the HPRC custom jupyter ai extension.

Module

Python/3.11.3 (foss/2023a)

Optional python environment to be activated

Enter the name of the python virtual environment to be activated. (Optional)

The default virtualenv for Python versions have jupyterlmod which enables loading lmod software modules.

Leave blank to use the [default](#) environment for the selected Module.

Your optional python virtual environment must have been previously built with one of the Python modules listed in the Module option above. See [instructions](#).

Launch

* The Jupyter AI Assistant session data for this session can be accessed under the [data root directory](#).

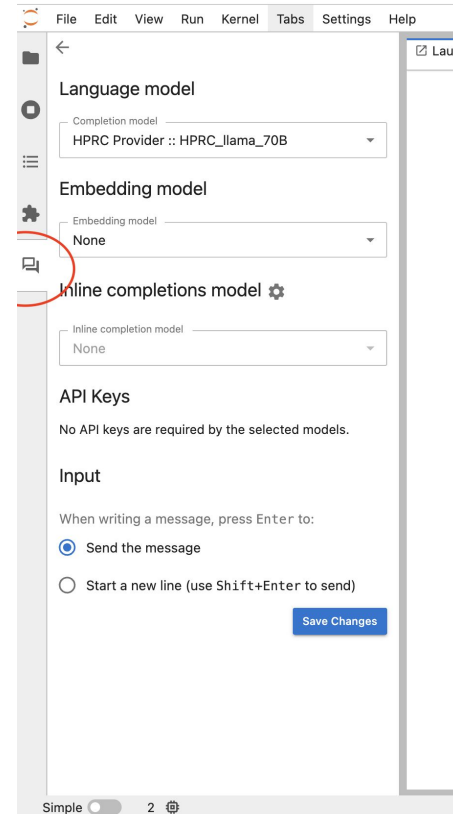

Using Jupyter AI Assistant

Using Jupyter AI Assistant

Click on the message icon on the left side of the screen

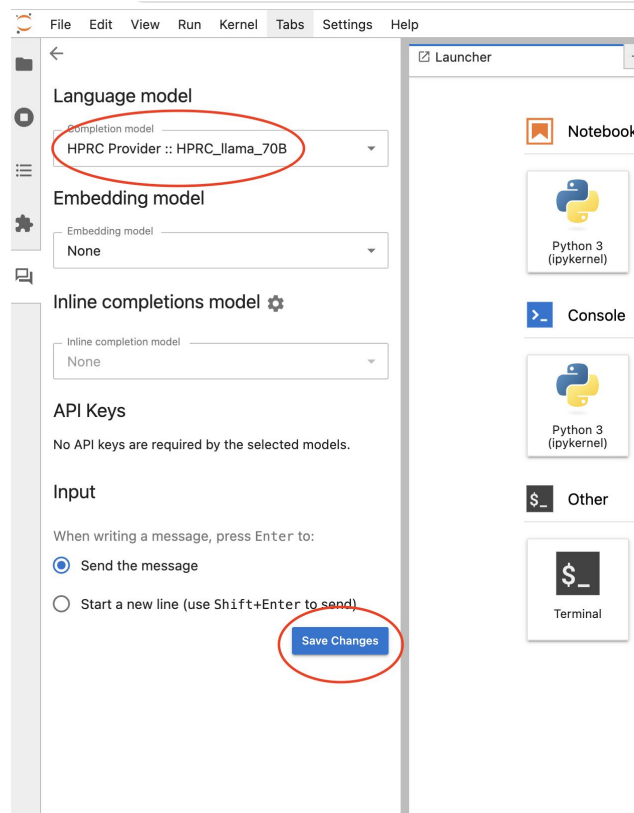

Using Jupyter AI Assistant

Select the “HPRC Provider
:: HPRC_llama_70B”
Completion model from
the dropdown

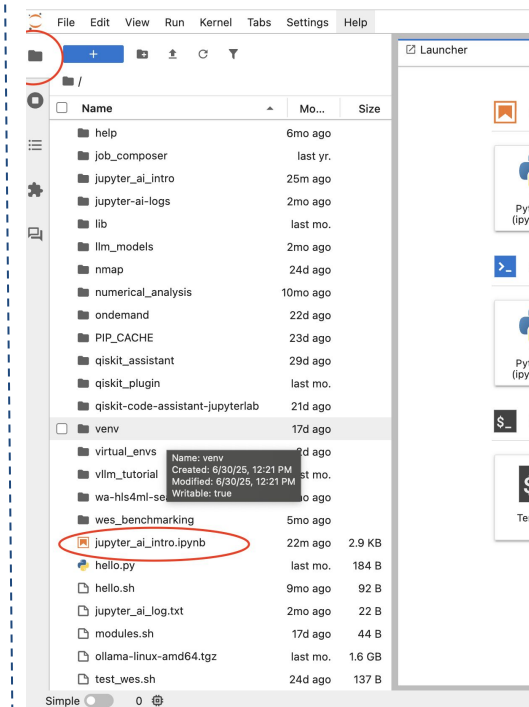

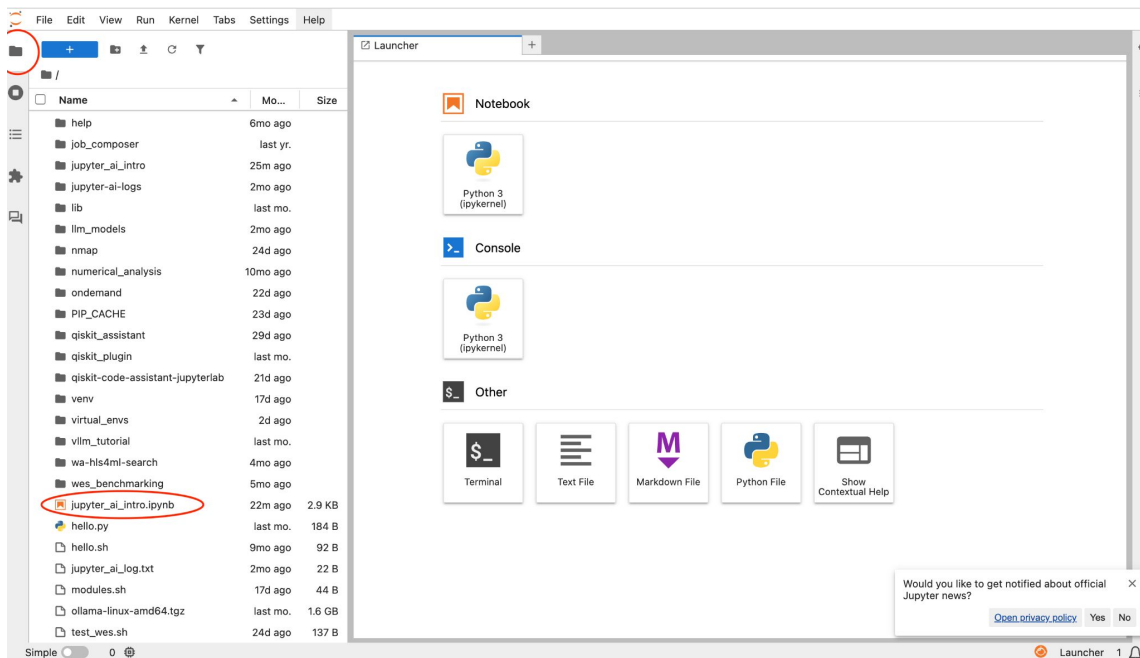

Click, “Save Changes”

Click the back arrow on
the top left to open the
chat window

Main Content

Open the “jupyter_ai_intro.ipynb” notebook in your jupyter ai assistant session:

Debugging a simple program

- Click on the highlighted code cell
- Run the code cell with the highlighted button at the top of the screen
- Use the `/fix` command in the chat window to help debug the issue

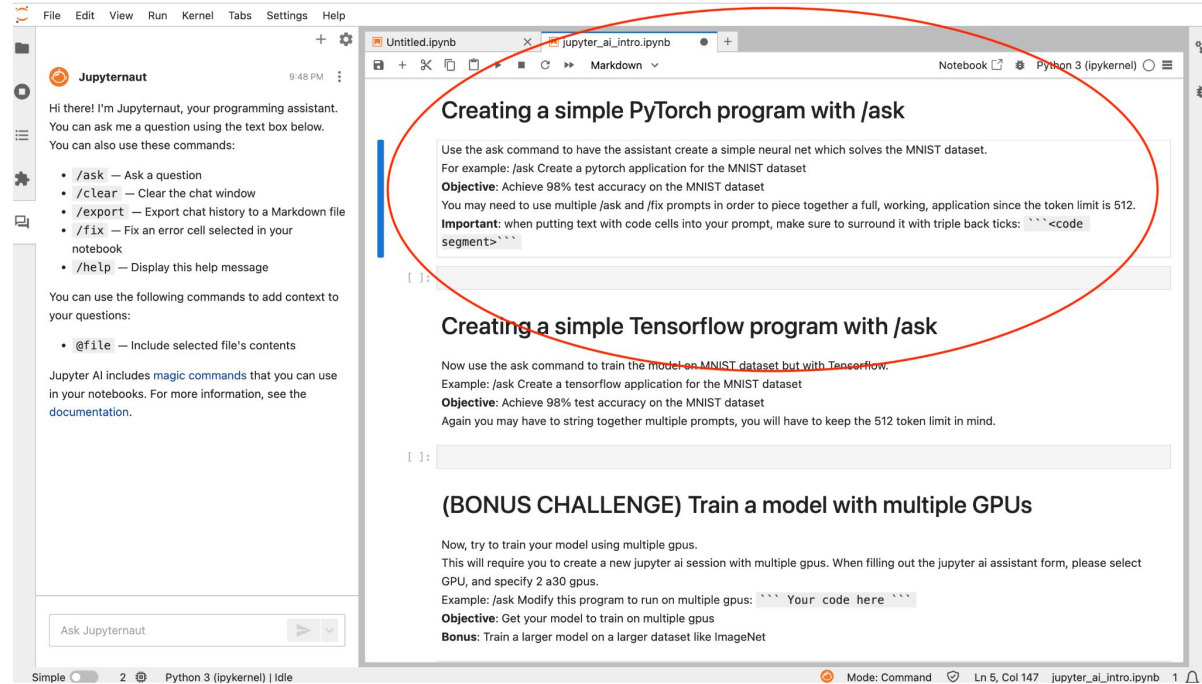

The screenshot displays the Jupyter AI interface. On the left is a chat window with Jupyter AI instructions and a list of commands: `/ask` (Ask a question), `/clear` (Clear the chat window), `/export` (Export chat history to a Markdown file), `/fix` (Fix an error cell selected in your notebook), and `/help` (Display this help message). The main area shows a Jupyter notebook with a code cell containing a Fibonacci function. The code is:

```
def fibonacci(n):  
    if n <= 1:  
        return 1  
    return fibonacci(n - 1) + fibonacci(n - 2)  
result = fibonacci(10000)  
print(result)
```

 The code cell is highlighted with a red oval, and the run button (a play icon) at the top of the cell is also circled in red. Below the code cell, there are sections titled "Creating a simple PyTorch program with /ask" and "Creating a simple Tensorflow program with /ask", each with instructions and objectives.

Creating a simple PyTorch program

- Use the `/ask` command to help develop code for solving the MNIST dataset with pytorch

The screenshot displays the JupyterLab interface. On the left is the Jupyter AI assistant chat window, titled 'Jupyter AI', which contains a list of commands: `/ask` (Ask a question), `/clear` (Clear the chat window), `/export` (Export chat history to a Markdown file), `/fix` (Fix an error cell selected in your notebook), and `/help` (Display this help message). It also mentions that Jupyter AI includes 'magic commands' and provides a link to documentation.

On the right is a Jupyter Notebook titled 'jupyter_al_intro.ipynb'. The notebook content is circled in red and includes the following sections:

- Creating a simple PyTorch program with /ask**
Use the ask command to have the assistant create a simple neural net which solves the MNIST dataset.
For example: `/ask Create a pytorch application for the MNIST dataset`
Objective: Achieve 98% test accuracy on the MNIST dataset
You may need to use multiple `/ask` and `/fix` prompts in order to piece together a full, working, application since the token limit is 512.
Important: when putting text with code cells into your prompt, make sure to surround it with triple back ticks: ````<code segment>````
- Creating a simple Tensorflow program with /ask**
Now use the ask command to train the model on MNIST dataset but with Tensorflow.
Example: `/ask Create a tensorflow application for the MNIST dataset`
Objective: Achieve 98% test accuracy on the MNIST dataset
Again you may have to string together multiple prompts, you will have to keep the 512 token limit in mind.
- (BONUS CHALLENGE) Train a model with multiple GPUs**
Now, try to train your model using multiple gpus.
This will require you to create a new jupyter ai session with multiple gpus. When filling out the jupyter ai assistant form, please select GPU, and specify 2 a30 gpus.
Example: `/ask Modify this program to run on multiple gpus: ``` Your code here ````
Objective: Get your model to train on multiple gpus
Bonus: Train a larger model on a larger dataset like ImageNet

Creating a simple Tensorflow program

- Use the `/ask` command to help develop code for solving the MNIST dataset with Tensorflow

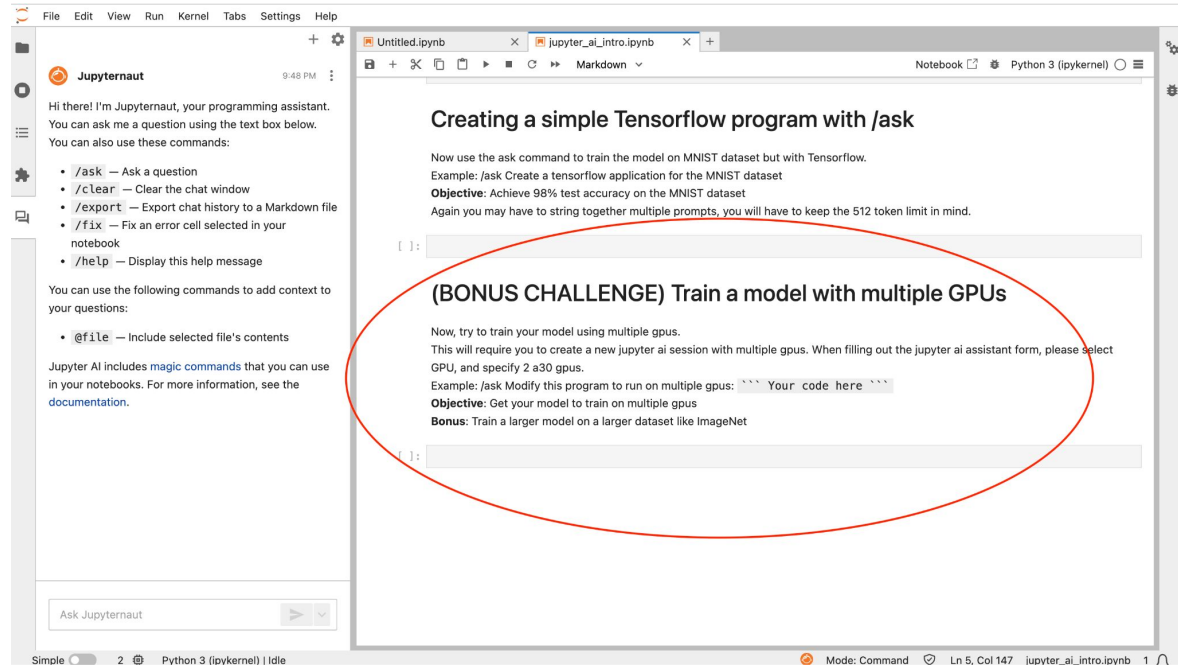

The screenshot displays the Jupyter AI interface. On the left is a chat window titled 'Jupyter AI' with a list of commands: `/ask` (Ask a question), `/clear` (Clear the chat window), `/export` (Export chat history to a Markdown file), `/fix` (Fix an error cell selected in your notebook), and `/help` (Display this help message). Below this, it states 'You can use the following commands to add context to your questions:' and lists `@file` (Include selected file's contents). At the bottom of the chat is an input field labeled 'Ask Jupyter AI'.

On the right is a code editor window titled 'Untitled.ipynb'. It shows a notebook with a red circle highlighting the text 'Creating a simple Tensorflow program with /ask'. The notebook content includes a prompt: 'You may need to use multiple /ask and /fix prompts in order to piece together a full, working, application since the token limit is 512. Important: when putting text with code cells into your prompt, make sure to surround it with triple back ticks: ```<code segment>```'. Below this, it says 'Now use the ask command to train the model on MNIST dataset but with Tensorflow. Example: /ask Create a tensorflow application for the MNIST dataset Objective: Achieve 98% test accuracy on the MNIST dataset Again you may have to string together multiple prompts, you will have to keep the 512 token limit in mind.' Below the highlighted text, it says '(BONUS CHALLENGE) Train a model with multiple GPUs' and 'Now, try to train your model using multiple gpus. This will require you to create a new jupyter ai session with multiple gpus. When filling out the jupyter ai assistant form, please select GPU, and specify 2 a30 gpus. Example: /ask Modify this program to run on multiple gpus: ``` Your code here ``` Objective: Get your model to train on multiple gpus Bonus: Train a larger model on a larger dataset like ImageNet'.

Bonus Challenge

- Create a new Jupyter AI Assistant session with 2 A30 GPUs
- Use `/ask` and `/fix` to help develop code which uses multiple gpus to train a large model on the ImageNet dataset

The screenshot shows the Jupyter AI Assistant interface. On the left is a sidebar with the Jupyter logo and a list of commands: `/ask` (Ask a question), `/clear` (Clear the chat window), `/export` (Export chat history to a Markdown file), `/fix` (Fix an error cell selected in your notebook), and `/help` (Display this help message). Below this is a section for adding context with the `@file` command. The main area on the right displays a notebook titled 'jupyter_ai_intro.ipynb'. The notebook content includes a heading 'Creating a simple Tensorflow program with /ask', followed by instructions to use the `/ask` command to train a model on the MNIST dataset. A red oval highlights a section titled '(BONUS CHALLENGE) Train a model with multiple GPUs'. This section instructs the user to train a model using multiple GPUs, requiring a new Jupyter AI session with 2 A30 GPUs. It provides an example prompt: `/ask Modify this program to run on multiple gpus: ''' Your code here '''`. The objective is to get the model to train on multiple GPUs, and the bonus is to train a larger model on a larger dataset like ImageNet. The interface also shows a menu bar at the top with options like File, Edit, View, Run, Kernel, Tabs, Settings, and Help. At the bottom, it indicates the current mode is 'Command' and the cursor is at 'Ln 5, Col 147' in the 'jupyter_ai_intro.ipynb' file.

Hi there! I'm Jupyter AI Assistant, your programming assistant. You can ask me a question using the text box below. You can also use these commands:

- `/ask` — Ask a question
- `/clear` — Clear the chat window
- `/export` — Export chat history to a Markdown file
- `/fix` — Fix an error cell selected in your notebook
- `/help` — Display this help message

You can use the following commands to add context to your questions:

- `@file` — Include selected file's contents

Jupyter AI includes [magic commands](#) that you can use in your notebooks. For more information, see the [documentation](#).

Creating a simple Tensorflow program with /ask

Now use the `ask` command to train the model on MNIST dataset but with Tensorflow.
Example: `/ask Create a tensorflow application for the MNIST dataset`
Objective: Achieve 98% test accuracy on the MNIST dataset
Again you may have to string together multiple prompts, you will have to keep the 512 token limit in mind.

```

Technical Challenges

- Running LLM inference server on Intel PVC requires a full exclusive node
 - OneCCL does not play well with slurm, see <https://community.intel.com/t5/oneAPI-Registration-Download/ccl-issue-with-Multi-GPU-AI-Training-Data-Parallel-with-Intel/td-p/1609982>
- vLLM on xpu device would sometimes hang indefinitely when queuing prompts
 - Workaround: design an in-take web server to distribute prompts onto the backend LLM inference servers
